

***Not just more effective.
More cost effective.***

WINNING TECHNOLOGY

**BATTLE
PROVEN**

Precision strike against moving and stationary ground targets. Utmost lethality. And clean battlefield operations.

That's the BLU-108 Sensor Fuzed submunition from Textron Systems. The only U.S. manufactured smart submunition in production today.

Currently in production for the U.S. Air Force, the battle-proven BLU-108 is also coming to be known as the cost-effective, deep-strike smart submunition for the U.S. Army's GMLRS rocket.

Whether it's delivered via dispenser, missile or rocket, ground vehicles don't have a chance.

But friendly forces and innocent civilians do. BLU-108 warheads have redundant self-destruct features that leave a clean battlefield.

Find out more about the unbeatable BLU-108. Go to our website at www.systems.textron.com now.

BLU-108 can be delivered by dispenser, missile or rocket.
