

## **INTELLIGENT MUNITIONS SYSTEM PROVIDES UNPRECEDENTED SITUATIONAL AWARENESS AND FORCE PROTECTION. THERE'S JUST NO WAY AROUND IT.**

As far as our Intelligent Munitions System (IMS) goes, there's no such thing as unknown territory. Because whatever the threat, if it moves, IMS will detect, classify and recognize it. If it continues to move in the direction of our troops, IMS will track, engage and destroy it.

IMS accomplishes its missions with a revolutionary networked system that combines detailed sensor intelligence with precision munitions, capable of delivering precise and lethal blows to tracked and wheeled vehicles alike. All from the vantage point the enemy least expects— from above.

Based on battle-proven Sensor Fuzed Weapon technology successfully deployed during Operation Iraqi Freedom, IMS feeds directly into the Future Combat System Network. Crucial information speeds through the network to the soldiers and units that need it for battlefield shaping and force protection— two key components of Assured Mobility.

In short, IMS makes the unknown familiar and the familiar neutralized. It attacks with a thoroughness that no enemy vehicle can escape. In fact there's just no way around it.
